Name – Hitesh Garg Date – 16/10/26

1. Problem:

Which ad platform and campaign type give the best return, and where should budget go?

2. Data:

1,800 campaigns across Google, Meta and TikTok. Campaigns run from Jan to Dec 2024 across 7 countries and 4 campaign types (Search, Display, Video, Shopping).
Columns like spend, clicks, conversions and revenue (simulated data).
The checks: no impossible rows, and CTR, CPA and ROAS rebuilt from raw columns all match.

3. What I did:

Excel Tables, SUMIFS and COUNTIFS, pivot tables, calculated columns, a Performance flag with IF and AND, an XLOOKUP region column, and a dashboard with 3 charts. Also ran basic SQL queries (SELECT, WHERE, ORDER BY) on the same data.

4. Findings:

- TikTok has the best ROAS (7.62), and Google the worst (3.47).
- 48% of TikTok campaigns are Strong, against 26% for Google. *(Strong = ROAS of at least 5 and conversion rate of at least 4%).*
- Google takes about 57% of total spend but only about 41% of total revenue.
- The USA spends the most and has the lowest ROAS (about 4.16); India has the best (about 5.50).
- Search campaigns have the best ROAS (about 5.31) and earn the most revenue ($15.2M).

What surprised me: I expected Google to lead because of its budget, but it was the weakest on return.

5. Recommendation:

Test moving about 10% of Google's budget to TikTok and Meta, then compare ROAS after 4 weeks. Caveat: this is simulated data, and a few campaigns with 40x+ ROAS have small budgets, so I'd check those before acting.

6. Next steps:

SQL, Power BI, GA4, Python.
